Ecodesign / 1. BImSchV (Stufe 2)

- 1) Indications on "Nominal output" determined with steel hood $\varnothing 180$ mm, installed catalytic converter and combustion air connection $\varnothing 150$ mm
- 2) Information on "Storage operation" for the version with top-mount accumulator MAS.
- 3) Damper flap recommended
- 4) Air cross-sections if the specified nominal heat output is desired as the heat output.
- 5) Fire safety: Values determined with air cross-sections recorded for testing purposes; active rear ventilation, stove shell is heat emitting.
Insulation thickness 5 cm calcium silicate board (brands: Promasil, Silka, Skamol) and 5 cm active rear ventilation with diagonally positioned air circulation and supply air openings of 75 cm^2 (5x15 cm) each. For detailed design, see assembly instructions.
- 6) Fire safety: values determined in safety test with air cross-sections recorded for testing purposes; stove shell is heat emitting.
Information on replacement insulation material with calcium silicate boards (brands: Promasil, Silka, Skamol).
The specifications for non-combustible walls/ceilings and the structure with a closed gap (30 cm) correspond to the specifications of TROL (Germany), see assembly instructions.
- 7) Heat protection plate: accessory for BKH flat/tunnel/corner versions; factory-fitted for BKH panoramic fireplaces.
